DOWNSPOUT EXTENSIONS

Preventative Steps to Keep your Home Healed

STEPS TAKEN TO PROTECT YOUR LARGEST INVESTMENT

1.

All public utilities are marked prior to Helitech's arrival. Homeowners should also have mark all private lines, such as sprinkler, pet fence, water, etc.

2.

The drain lines will be laid out to verify locations and exit points.

3.

The trench is either dug by hand using a tile spade to remove the sod and excavate the trench, or a walk behind trencher is used to cut through the soil and create a smooth, even trench or installation.

4.

Once the trench has been excavated, the crew will install the downspout lines by attaching each section of pipe and properly securing them to make sure all water flows out to the exit point. All pipes are verified for flow to the exit point.

5.

Depending on the grade of your yard, Helitech will install a yard grate at the end of the downspout line to allow the water to flow freely or a pop up for water to be pushed out of if your yard is flat. Both of these are easy for homeowners to mow over or around and virtually maintenance free.

6.

All soil is backfilled into the trench and any excess is removed from the job site. If sod was removed, it is replaced. Seed and straw are placed over the excavated trench. All items are cleaned up and you are left with peace of mind when it rains.

OVER 100,000 HOMES HEALED, 5 DECADES STRONG

HELITECHONLINE.COM | 800-246-9721
